

# NXPowerLite™

## Desktop Edition

### Optimize documents, spreadsheets, presentations and images within your workflow

NXPowerLite Desktop Edition optimizes your Word documents, Excel® spreadsheets, PowerPoint® presentations and JPEG images – reducing them to a fraction of their original file size. Files remain in their original format, with no discernible loss of quality – and there's no need to unzip before using them.

It's incredibly easy to use. Simply select a file, choose your optimization level and click the 'Optimize' button.

If you use Lotus® Notes®, Microsoft® Outlook®, Outlook® Express or Windows® Mail, it's even easier. NXPowerLite Desktop Edition will automatically optimize email attachments as they are sent. File recipients don't need NXPowerLite to open or edit the attachments.

#### Improve staff productivity

File optimization improves productivity; end-users can create and share image-heavy content without worrying about how it will be delivered. It also cuts down the time IT staff spend dealing with storage and bandwidth limitations.

#### Slow email storage growth

Organizations are now legally obliged to store email content for a number of years, dramatically increasing storage requirements. File optimization slows email storage growth, extending the life of your existing hardware.

#### Speed up antivirus scans

Large files take longer to scan. Optimizing them increases the speed of security and antivirus checks.

#### Shorten network response times

Large files slow down your entire network. File optimization can significantly lighten the load, reducing data transfer costs and improving network response times – so remote users can 'feel' local.

#### Avoid security issues

If files are too large to email, end-users may resort to FTP, personal webmail or online file-sharing services. File optimization ensures they won't need to distribute files via these less secure methods.

#### Cut postage and courier costs

Organizations spend a lot of time and money physically distributing large files. File optimization enables users to email files that would otherwise be mailed or couriered.

*“NXPowerLite has been thoroughly tested under the most rigorous of operational circumstances and was never once found wanting.”*

#### What is file optimization?

Files are often much larger than they need to be. Optimization makes them smaller.

It works by eliminating any excess baggage and converting graphics to the most appropriate file format and resolution.

File optimization reduces the size of image-heavy files far more effectively than traditional compression methods. Your files retain all their functionality, so they can be opened and edited by anybody. There's no need for special decompression or viewing software.

### Choice of optimization levels

You can optimize for screen, print, mobile devices or select your own custom settings.

Whichever you choose, you'll find that NXPowerLite is far more effective than ZIP compression on image-heavy files.

### Batch processing

You can optimize multiple files in one sitting - simply drag them onto the NXPowerLite window to build a list of files to optimize.

If you add a folder or standard ZIP archive to the list, NXPowerLite will search through it and optimize the Word, Excel®, PowerPoint® and JPEG files it finds.

### Email add-in

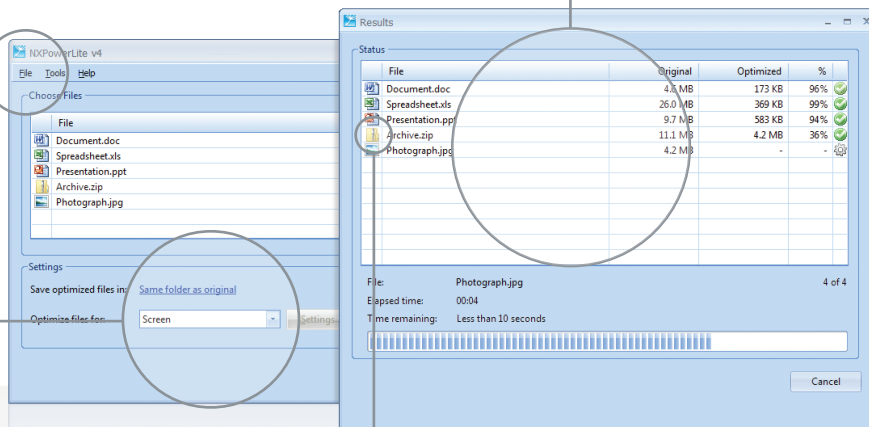

NXPowerLite integrates with your email client to automatically optimize attachments.

If you decide that you don't want to optimize an attachment, it's easy to temporarily disable the optimization (it will be re-enabled next time you send an attachment).

### Simple user interface

NXPowerLite Desktop Edition is fast, effective and incredibly easy to use.

The simple user interface feels instantly familiar and you'll be optimizing your Word, Excel®, PowerPoint® and JPEG files within seconds.

### Microsoft® Office integration

NXPowerLite is fully integrated with Microsoft® Office, so you can optimize from within Word, Excel® or PowerPoint®. You can also optimize a file by right-clicking in Windows® Explorer.

### ZIP archive optimization

You can even optimize files when they're stored within standard ZIP archives. NXPowerLite will look inside your .zip files and optimize any Word, Excel®, PowerPoint® or JPEG files.

*“Any user who frequently works with large Microsoft® Office files should give this simple, effective application a try.”*

### System requirements

Compatible with PCs running Microsoft® Windows® 2000 or later. Microsoft® Office integration requires Office 2000 or later. Email integration requires Lotus® Notes® (6.0-8.0), Microsoft® Outlook® (2002-2007), Outlook® Express (6.0) or Windows® Mail (6.0).

NXPowerLite Desktop Edition can optimize Microsoft® Word, Excel® and PowerPoint® files and JPEG images. It can also optimize standard ZIP archives containing any of these file types.

### NXPowerLite File Server Edition

Automatically replace the Word, Excel® and PowerPoint® files on your servers with smaller, optimized versions.

The Desktop and File Server Editions of NXPowerLite can be combined to create a powerful, tailored solution that maximizes your return on investment.
